Peabody Seven Hills NESAs (7) (1).pdf

Steve

Thanks for helping find a HEA expert to help review the attached HEA analysis. I understand that it is not reasonable to expect any feedback on this by Monday but would it be possible to get some feedback within 1-2 weeks?

I'm looping in the FWS lead with the Bloomington office as well. EPA and FWS are meeting with the Corps next Tuesday to discuss this project. At this point I think we are just going to say that we are reviewing the HEA and will provide comments later but that we are concerned that the tool might not have been applied appropriately in this context and that we have concerns with some of the inputs used and assumptions made.

Thanks for any input you HEA folks can offer.

Palmer and Susan-Marie -

I am certainly no HEA expert, but I do know a few. Please let me know if you want me to try to find one to help you with this issue on such short notice. Can't guarantee that they'd be able to

drop what they're doing and get you something by Monday.

OK, I'll see what I can do. Have you reached out to Steve Glomb at DOI?
steve_glomb@ios.doi.gov Don't know if he's a HEA expert but he probably knows one or two.

We would appreciate any initial feedback by COB Monday b/c our folks are meeting with the Corps on Tuesday AM to have initial discussions.

Additional feedback would be appreciated within a week.

Is that doable?

What's your time frame on needing an answer? I can ask our top-notch economist to look at it, but that might take a few weeks. If you need an answer ASAP there are others I could ask.

One thing that jumps out at me right away is their calculations are based on a time frame of "in perpetuity". HEA was not designed to be used that way, and if you think about it, if your time frame is infinity, any difference between the ecosystem services provided by a pre-development site and a post-development are negligible.

But that's my gut feeling, let's wait and hear what the experts think.
